Objective

Computer Science student at the University of Toronto Mississauga with experience in full-stack development, machine learning, and UI/UX. Interested in building clean, scalable applications and intuitive tools that connect technical insight with real-world usability.

Technical Skills

Languages: Python, Java, Dart, TypeScript, JavaScript

Frameworks/Tools: React, Firebase, Flutter, Git, scikit-learn, Pandas, NumPy, Azure

Core Competencies: Full-Stack Development, ML, UI/UX, Data Analysis, Cloud Services

Experience

Full Stack Developer

Legislate for Life

React, TypeScript, Firebase

- Built frontend features for a React + TypeScript + Firebase platform, focusing on component architecture, state management, and clean data flow.
- Integrated Firebase Auth and Firestore, improving reliability and reducing unnecessary reads.
- Translated product requirements into responsive, accessible, and reusable UI components.
- Contributed to project structure, coding standards, and workflows supporting scalable feature development.

Logistics & Finance Officer

Computer Science Student Community (CSSC) @ UTM

- Coordinated with external organizations to deliver technical workshops, managing scheduling, communication pipelines, and end-to-end event logistics.
- Managed club funds exceeding \$1,000, including budgeting, expense tracking, and financial reporting.
- Worked with the executive team to plan semester budgets, prioritize initiatives, and allocate resources to maximize impact across technical and community programs.

Projects

GeoGuessr-Inspired Country Classifier (*Python, scikit-learn, Pandas*)

Designed a 200-row, 12-feature synthetic dataset across 7 countries and trained a Decision Tree Classifier achieving ~80% accuracy.

LIN101 Study Hub (*Flutter, Dart, Firebase*)

Built a course-specific study platform with modular UI, responsive layouts, and search/navigation features.

MapMates (*Flutter, Dart*)

Developed a geography puzzle game with continent-matching logic and clean, beginner-friendly UI/UX.

TypeBlast (*Java*)

Created a typing-based game with real-time input handling, scoring algorithms, and smooth cross-platform performance.

Certifications

Microsoft Azure Fundamentals

Kaggle: Intro to Machine Learning

PCEP – Entry-Level Python Programmer

Education

University of Toronto Mississauga

Honours B.Sc. in Computer Science

2025–2029
