Objective

Computer Science student at the University of Toronto Mississauga with experience in full-stack development, machine learning, and UI/UX. Interested in building clean, scalable applications and intuitive tools that connect technical insight with real-world usability.

Education

University of Toronto Mississauga
Honours B.Sc. in Computer Science

2025-2029

Technical Skills

Languages: Python, Java, Dart, TypeScript, JavaScript

Frameworks/Tools: React, Firebase, Flutter, Git, scikit-learn, Pandas, NumPy, Azure, Vercel

Core Competencies: Full-Stack Development, ML, UI/UX, Data Analysis, Cloud Services

Experience

Full Stack Developer

React, TypeScript, Vercel

Legislate for Life

- Contributing to the development of a React + TypeScript + Vercel web platform as part of a small engineering team
- Built frontend features with clean component architecture, state management, and optimized data flow.
- Delivered responsive, accessible UI components aligned with product requirements.

Logistics & Finance Officer

Computer Science Student Community (CSSC) @ UTM

- Coordinated technical workshops with external organizations, managing scheduling and logistics.
- Managed club funds exceeding \$1,000, including budgeting and financial reporting.
- Planned semester budgets and resource allocation with the executive team.

Projects

Sova: Visual-Audio Navigation for the Visually Impaired (*React, Firebase, ElevenLabs, Computer Vision*)

- Built an indoor navigation system using QR-code localization and real-time camera detection.
- Integrated ElevenLabs to generate natural voice instructions for hands-free indoor guidance.
- Developed a React web interface and hardware prototype; won 3rd place at DeerHacks V.

GeoGuessr-Inspired Country Classifier (*Python, scikit-learn*)

Created a 200-row, 12-feature dataset and trained a Decision Tree Classifier achieving ~80% accuracy.

LIN101 Study Hub (*Flutter, Firebase*)

Course-specific study platform with modular UI, responsive layouts, and search/navigation tools.

MapMates (*Flutter*)

Geography puzzle game with continent-matching logic and beginner-friendly UI/UX.

TypeBlast (*Java*)

Typing-based game with real-time input handling, scoring algorithms, and smooth performance.

Certifications

Microsoft Azure Fundamentals

Kaggle: Intro to Machine Learning

PCEP - Entry-Level Python Programmer
